

# Claus elevator buckets

Claus elevator buckets made of pressed steel (ST37 or stainless steel) are suitable for a variety of different products. The relatively low rear height of the buckets allows a considerable bucket density (buckets per meter).

The low rear height and the relatively large projection guarantee that the Claus bucket easily ejects its product even at high belt speeds. This makes it possible to attain a higher capacity.

Claus elevator buckets made of steel/stainless steel (parameters in mm)

Type	Size/weight					Volume	Holes		Max.			
	b	a	h1	h2	t		Z2	Z3		d	e	no. bckts/m

Z2 = gross volume in liters, Z3 = net volume in liters.

C300 x 180 and S450 are equipped with slotted holes\*

Claus elevator buckets are also available in thicknesses (t) of 2.5 and 3.0 mm.
